

# CONNECT

## The Ultimate Organizational Platform

Bridging Gaps in Dining, Location, and Academic/Professional Needs  
Get Connected with Connect!!!!

# Problems Addressed

- Difficulty in managing and comprehending information from classes and meetings for students.
- Ambiguity on where a user can eat.
- Suboptimal resource utilization (food, shuttle services) by the management and students.
- Navigational issues for students in large campuses.

# Business Concept

## Integrates

### Dining

- Problem: Inefficient management and utilization of dining facilities, and students' difficulty in locating desired meals.
- **Solution:** connects students with on-campus dining options based on proximity, and dish preferences
- **Benefit:** management receives data-driven insights to minimize food wastage and optimize inventory.

### Classes

- Problem: Managing and comprehending a plethora of information from various classes and meetings.
- **Solution:** A platform that transcribe, summarize, and store content from classes and meets using generative AI.
- **Benefit:** Facilitates better info retention and management for students and professionals alike.

### Maps/Shuttles

- Problem: Navigational challenges for students or staff across campuses, locations and shuttle timings.
- **Solution:** provides map of campus, and shuttle services info
- **Benefit:** Enhances user movement experience and aids management in optimizing shuttle service through usage data.

# Behind the Scenes of Connect

## Dining

### Restaurant and Menu Management:

- Established restaurant entries and configured respective menu items.

### API Development:

- Developed an API to retrieve all restaurant details.
- Created an API to log all searched items by users.

### Smart Search and Mapping:

- Integrated search functionality with data, focusing on showcasing only operational places on campus. sorted based on proximity

### Predictive Analysis for Optimization:

- Utilized search data to predict customer flow and implement strategies to minimize food wastage, and inventory management.

## Classes

### Video Upload and Data Extraction:

- Administrators or professors upload video lectures which undergo video and audio to text extraction processes.

### Data Cleaning and Optimization:

- Extracted data is refined by cleaning and removing redundancy to enhance accuracy in summarization.

### Machine Learning Model for Summarization:

- Cleaned data is processed through a Machine Learning model to generate a concise summary of the lecture.

### Summary Posting:

- The generated summary is posted on the website, providing students with an accessible and concise overview of the lecture.

## Maps/Shuttles

### Shuttle Information Availability

- Displays details of all available shuttles for students and employees to select.

### Real-Time Shuttle Mapping

- Redirects to shuttle maps, providing real-time specific shuttle information and tracking.

### Inclusive Campus Mapping

- Offers an exhaustive campus map to retrieve diverse information and navigate through the university.

Target Audience

### Primary Audience

*Students and university staff seeking an organized and efficient means to navigate through daily university life.*

### Secondary Audience

*University management and administrators focusing on optimized resource utilization and improved student experiences.*

### Tertiary Audience

*External entities like dining service providers, aiming to enhance their service delivery and management through data-driven insights.*

# Monetization Strategy

## ● B2B Model

*Forge partnerships with dining services, offering predictive analytics to optimize their operations for a fee.*

## ● Subscription Model

*Introduce a premium user version, providing additional features and enhanced user experience for a subscription fee.*

## ● Data Analytics Service

*Offer universities a subscription-based access to advanced, detailed analytics, aiding in strategic decision-making and resource optimization.*

## Geographical Expansion

*Initiate with select universities and progressively deploy across various global locations.*

## Diversification

**School Level:** *Adjust the platform to cater to school students and administrations, focusing on cafeteria management, school bus tracking, and class summaries.*

**Corporate Level:** *Adapt the platform for office environments with features like canteen management, meeting room bookings, and summaries of meetings.*

## Technology Enhancement

*Continually upgrade technological aspects, incorporating more advanced machine learning models, and possibly integrating IoT devices for more accurate data collection and analytics.*

## Scalability Plan

# Evolution

## User-Centric Development

### Community Building:

- Develop features to facilitate user interaction, community building, and collaborative activities within the platform.

### Personalized User Journeys:

- Enhance user profiles and journey mapping to provide deeply personalized experiences, from navigation to dining and informational content.

### User Feedback Integration:

- Implement a robust feedback system, ensuring user input is integral in shaping future developments of Connect.

## Adaptive Technologies

### AI and ML Advancements:

- Continuously refine and advance AI models to deliver richer, more accurate predictions and personalized experiences.

### Security Enhancements:

- Ensure data integrity and user privacy by adopting the latest cybersecurity technologies and practices.

## Diverse Monetization

### Marketplace Integration:

- Introduce a marketplace where external vendors, like food outlets or bookstores, can offer services directly to users.

### Advertisement Platform:

- Develop a nuanced advertisement platform, offering targeted advertising opportunities to businesses within and outside the platform.

### Data Insight Sales:

- Provide data insights and analytics-as-a-service to businesses looking to understand user behavior and trends.

# Future Scope

## What's next for Connect 🚀

- Looking ahead, we plan to incorporate more personalized features, such as individual study plans based on lecture summaries and dietary preferences for meal recommendations.
- We also envision a community feature where students can exchange notes, discuss popular dishes, or even coordinate shuttle rides together.
- Expanding to other campuses and integrating further campus services, like library bookings or event notifications, are also on the horizon.
